

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for April 2021.

The increased flow for the dates 12th, 13th, 15th, 19th, 21st, 23rd, 24th, 25th, 26th and 29th of April was due to seasonality effect, when the amount of water at intake was more than the Plant's capacity.

The increased flow for the dates 11th, 20th, 22nd, 27th, 28th and 30th of April, was due to stop at generation, when no water was drawn to intake.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m3/sec.
