

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for August 2026.

In August, the increased water flow in the river channel was caused by the ongoing maintenance works on the 220 kV transmission line “Paravani-220” on August 1 and 2, 2026, as well as by an emergency shutdown resulting from a voltage interruption in the system on August 5.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m³/sec.
